WRAPPED BSC GRECAS (WBGCS)
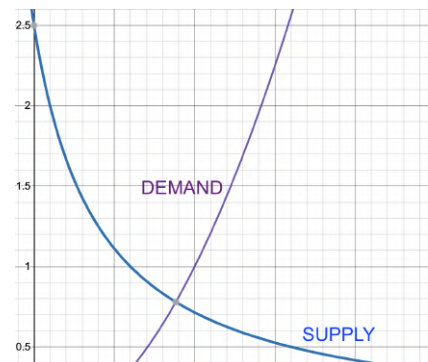

OFFICIAL WHITE PAPER

ABSTRACT

GRECAS platform on which the WBGCS coin is based conceptualized anonymous developer into cryptocurrency with a brand new approach to token farming and deflationary currency. DeFi coin as a proposal against inflation and full utility, inertly cultivating burn the token. WBGCS Token it is the main static reward token for holders. GRECAS uses advanced static agriculture incentive algorithm holders for placing large positions and keep it. Every time the owner of the token closes part of its position 5% of their closure will be distributed among all other holders, mostly bringing more reposts to the user free, plus 0.5% in new platform tokens. With a regular monthly burn 1,000,000,000,000 (trillion) tokens from the original supply pool will be constantly destroyed. Burning a token is strategic anti-inflationary a measure that guarantees the value of the coin will not become drowned out by its supplies.

Microeconomics shows us that as the demand for an item goes up, its supply will go down due to user consumption.

As the demand for WBGCS soars the supply is reduced following the aforementioned token burns and static farming protocols. This procedural deflationary tactic accelerates the demand curve exponentially, as the supply curve drops and users are forced to purchase at a higher price to meet the demonstrated demand at lower and lower supply levels.

TOKEN VALUES

WBGCS is a community-based and community-driven token, guaranteeing complete and utter transparency through every step. We value our holders and our steadfast user base the same way we value our family. However, this means that Wrapped BSC GRECAS is going to work like a family, so each party is going to have some responsibility.

Our responsibility, as the dev team, is to ensure that your trip with WBGCS soars as smoothly as possible. We are constantly holding "AMAs" (Ask Me Anything), talking to our user base in Discord, Telegram, Twitter, and other socials, previewing marketing initiatives and burn e orts before they go live to the public, and asking for community input.

Your responsibility as a Holder is to do just that:

Hold! All we ask of you is to be transparent with us, vote on what you like about the token, spread the word to your friends and family, and HODL!

Safety, Transparency, and Evolution are our three driving principles that you can rely on. The WBGCS project aims at unlocking liquidity in smart assets through an end-to-end decentralized ecosystem, safely improving on current tokens and ensuring a DeFi approach. As mentioned above, transparency is critical, so WBGCS has developed a state of the art transaction log where you can see every transaction as it happens, real-time. We are bringing our Holders into the future, so hop on and enjoy the ride.

ADVANCED ROADMAP

Ensuring that our operations management is sustainable and suits WBGCS best for fast-paced, long term growth is another of our token's core values. Sustainable progression is best achieved through setting advanced goals that are reasonable to attain with a community effort. WBGCS is going to be here for a long time, and with that, the development team has set a definitive long term vision. Let's walk through it.

Phase 1: Initiatives

➜ Stealth Launch: The token was strategically launched without making much of a marketing push, allowing a community to form around the coin before large buyers and whales could get in and out for a quick dollar.
➜ Initial Exposure: Once the community was identified and fortified, the dev team began the marketing push and mass-media exposure, promoting awareness about our wonderful community.
➜ Core Team Building: The team is rapidly expanding to accommodate for the immense demand that WBGCS has generated. This includes opening our arms to more programmers, marketing specialists, graphic

designers, and expanding our connections network.
➜ Community Health: It is imperative for our success that we allow time for the FUD (Fear, Uncertainty, and Doubt) and paper-handed investors to mitigate themselves, so those who came for a quick dollar have finally begun to leave out boredom or needless anxiety. This method is going to build the strongest, most steadfast user base.

Phase 1: Status

➜ "The stealth launch has been completed and is a huge success.

➜ Initial Impact: We are featured on Twitter, an active Telegram for creating a family!

➜ Our core team building efforts are about 30% complete, our team has expanded, but we still need more hands. Contact us on Discord or Telegram,if you have a passion for the computer.

science, graphic design, social media, and/or marketing!

➜ It is estimated that the health of the community is growing, which makes us a very dynamic and vibrant community, but still there are people with paper slips who will need to sell or place a bet

Phase 2 Initiatives and Beyond

➜ Product Development: GRECAS is currently working on several series of NFTs and on a new application for the implementation of the NFT platform in its own DEX site.

➜ Increasing impact: GRECAS marketing and graphic design teams are steadily preparing for yet another massive marketing push,aiming to expand the user base with huge profits.

➜ Partnership: In addition to the listings on PancakeSwap and Uniswap, we are working day and night on some more HUGE exchange trades that will bring

WBGCS accessibility to the masses.

➜ Stratospheric! These are merely the fringes of the beginning. There is so much more to come and we are so excited for you all to grow as we grow.

Phase 2 Status

➜ Product Development: We are constantly updating, preparing a new, informative website and improving the user experience, so expect regular updates. As we speak, NFTs are being developed and programmed, and applications are already underway.

➜ Increased impact: to be expectedthat this first marketing ploy will be launched in the near future. Make sure you strap on, because it will be an incredibly fast way to the top!

➜ Partnership: The GRECAS team is currently developing projects for bridges to other blockchain exchanges day and night. More coming soon!

TOKENOMICS + TOKEN ECOSYSTEM

WBGCS Token

WBGCS (Wrapped BSC GRECAS) is Rooting BEP20 Coin with BSC with Initial Fixed
Supply of 10 Septillion Tokens. This supply will never increase, it will only decline.
January 2022 monthly initial burn 1 Trillion tokens.

Total supply: Token liquidity is at the expense of 10% tax on eachsale where 5% of the total amount is divided the bet will go towards the blocked liquidity pool, in 2022 another + 0.5% of the new Token for the amount of the WBGCS exchange at each Swap, while the remaining 5% the sold token will be distributed proportionally between users' wallets. 3% of the token was allocated for development team bringing in 97% all WBGCS assets must be fully community based. This code hardwired and unchangeable in anatomy WBGCS
ensuring development responsibility and creation of the WBGCS completely protected from the rug.

Binance Smart Chain

Binance Smart Chain (BSC) is a blockchain network parallel to the

Binance Chain. BSC demonstrates smart contract compatibility with the Ethereum Virtual Machine (EVM), while Binance Chain does not support these kinds of contracts.
Binance Smart Chain facilitates the acquisition and static

farming of WBGCS in Ethereum Based Wallets,

such as MetaMask or Trust Wallet. The largest benefit of basing the token along the Binance Smart Chain is the diminished fees and lower taxes the user goes through when exchanging, as Ethereum gas fees are consistently high.

PancakeSwap

PancakeSwap is another greatly unique feature of the Binance Smart Chain, as users can swap their altcoins or other BEP20 coins for WBGCS instantly. Users even have the ability to swap BNB, ETH (BEP20) for WBGCS, promoting further mass-adoption of our token.
